

Improve Brush Control Results

Controlling unwanted brush can be a challenge for any vegetation manager. Due to the many variables that impact performance, satisfactory and consistent results are often not achieved—until now. Milestone® herbicide offers excellent noxious weed and brush control, across a wide variety of use sites, with little to no damage to grasses, forbs or other key members of the native plant community.

About Milestone

- Approved as a Reduced Risk Pesticide by the EPA
- Low use rates - maximum 7 fl oz/A broadcast rate
 - Maximum spot treatment rate of 14 fl oz/A as long as less than 50% of the acre is treated
 - Common low volume backpack rates range from 0.25 to 0.50% v/v
- Compatible with all standard brush control herbicides
- Available in multiple packages sizes—quart, 2.5 gallon, and returnable, refillable containers through the Continuum™ System

Impact on Brush Control with Milestone

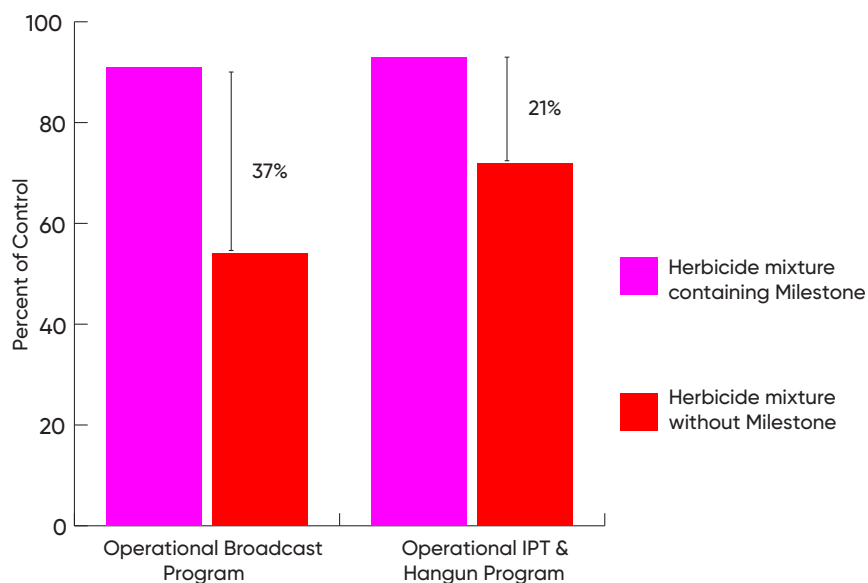

Years of operational experience has shown that adding Milestone herbicide as a tank mix partner helps you achieve the consistent, long-term results you want. Just one year after treatment, areas treated with a mixture containing Milestone showed 20 to 37 percent better control of woody brush species in general than a mix without Milestone, depending on the application method.

Works Across Various Brush Species

Mix Milestone with either selective or non-selective herbicides for brush control mixes to improve control of:

- Legume species including Black Locust, Honey Locust, Mimosa and Mesquite
- Southern pine species including Loblolly, Slash and Shortleaf
- Multiple hardwood species including Cherry, Poplar, Elm, Oak and Sweetgum

Brush Control Comparison Rated at 1 YAT

Key Benefits of Milestone

- Class Leading Grass Safety. Improves grass sustainability and density, slowing re-invasion of brush species.
- Maximum Flexibility. You're able to treat terrestrial and seasonally dry wetlands as well as grazed areas. Treatments can be made up to the water's edge.
- Mix Enhancements. Available in the Continuum System for customized blends.
- Flexible Application Methods. Get year-round brush management while being able to utilize any type of equipment suitable for the site.
