

Elite

Imperial

water conditioning agent

Begin with the Best Water

- Ammonium sulfate (AMS) water conditioner complexes and sequesters hard water particles to prevent them from binding to the active ingredient and reducing efficacy.
- Encourages rapid uptake of the application.
- Recommended for use whenever the active ingredient label calls for the addition of AMS.
- Has been shown that 4 pints of Imperial are as effective as 8½ pounds of AMS in tank mixes that include glyphosate.
- Cost effective low use rate.
- Easier to store, transport and mix.

Directions for Use

Follow the recommendations of the most restrictive active ingredient label.

Tank mixtures should only be applied within the label recommendations of every product in the tank mixture.

APPLICATION RATES

Application	Rate per 100 gallons of spray solution
Ground	1-4 pints
Aerial	2-4 pints
Water conditioning	1-5 pints

Elite Imperial should be added before any other tank mix partners. Not recommended for use with SUs or phenoxy acid formulations that are sensitive to low pH.
