

Elite

Pine Away™

modified vegetable oil concentrate & deposition aid

The true goal of any surfactant is to provide a superior penetration into to the target plant. This is especially important when trying to control invasive plants – like bush honeysuckle and autumn olive trees. It is also important late in the summer, when plants are under stress from heat or drought conditions. Methylated Seed Oil (MSO) is an excellent choice to move herbicides into the plants vascular system to control the target plant. So, what is the deposition aid you should be choosing?

Elite Pine Away is a multifunctional spray adjuvant developed as a penetrating surfactant concentrate and sticker/spreader with wetting, penetrating, and coating characteristics. This Elite product is designed as a replacement for non-ionic surfactants, crop oil concentrates, and methylated seed oils in liquid spray mixtures.

How Does it Work?

Elite Pine Away contains a proprietary agent that bonds the pesticide solution to the crop and decreases the chances of pesticide run-off due to rain. When used as directed, Elite Pine Away maximizes the activity and effectiveness of certain herbicides in post emergence applications. Therefore, care must be taken in treating sensitive crops during periods when plants are subjected to drought stress, high temperatures, and high humidity.

A Consolidated Choice

- Reduce the number of products you have to mix since it's two surfactants in one
- Low 1% Use Rate
- Cost effective solution
- Wetting, penetrating, and coating characteristics

FOR GROUND APPLICATIONS: Using at 1% v/v (25 GPA) will deliver 32 fluid ounces per acre.

FOR AERIAL APPLICATIONS: Using at 1% v/v (15 GPA) to 1.5% v/v (10 GPA) will deliver 19.2 fluid ounces per acre.
