

Elite

Supreme

premium methylated seed oil adjuvant

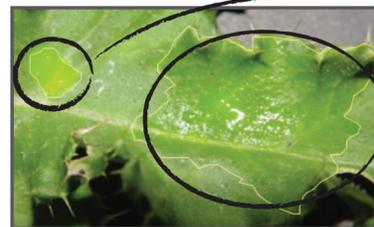

Premium performance made possible.

The costliest spray you will ever apply is a re-spray, required when your initial herbicide application results in inadequate penetration. Elite Supreme concentrated surfactant combines the penetrating power of modified seed oil and the superwetting properties of organosilicone surfactant blend to achieve quicker and more efficient spreading and penetration of a target surface area.

Adding Elite Supreme to an herbicide application is guaranteed to improve results.

- Enhances pesticide uptake through quicker wetting and target penetration than standard surfactant packages.
- Facilitates permeation into waxy, weather-hardened cuticles, carrying actives to the mode of action sight even under difficult field conditions, such as periods of low relative humidity and temperature extremes.
- Improves rainfastness by quickly transporting the active ingredient through the cuticle, enhancing the herbicide's ability to withstand rainfall and increasing the efficacy of the application.
- Contains concentrated active ingredient for quick entry into the plant, reducing volatilization and photo degradation.
- Enhances pesticide uptake through quicker wetting and target penetration than standard surfactant packages.

Water

Elite Supreme

Use Rates

Ground: Above 5 gallons per acre. Use 1 to 4 quarts per 100 gallons.

Ground and Aerial Applications: Below 5 gallons per acre. Use 1.5 to 4 ounces per acre with a minimum of 0.25% v/v concentration. In aerial applications greater than 5 gallons per acre, maintain at least 0.25% v/v concentration.

Aquatic: Use 3 to 5 pints per 100 gallons.
