Elite Vigor

tank cleaner

Prevent Cross Contamination

- Multi-component active ingredient mixes leave hard to remove residues in complex spraying rigs.
- Thorough cleaning is required to prevent cross contamination.
- Crop injury may not appear until later in the season.
- Even small amounts of herbicide residue can cause reduced yields.
- Simple household cleaning products aren't powerful enough to remove modern chemistries.
- ELite Vigor is formulated with emulsifiers and high pH components to penetrate and solubilize active ingredient residues and bond them to the rinse water.
- Recommended for all spray equipment types - especially for fiberglass and poly tanks that may be harder to completely decontaminate than stainless steel.

Directions For Use

SPECIAL PRECAUTIONS / RINSATE TESTING: The use of Elite Vigor or other tank cleaners does not guarantee removal and/or neutralization of all residues. Many active ingredients, such as 2, 4-D and dicamba, may leave persistent or hard-to-remove residues. Some AI mixes can be slow to release from equipment surfaces, and soaking for 12-24 hours may be necessary. After cleaning, empty the system and thoroughly flush all components with clean water.

USE RATES

Elite Vigor is effective at dilution rates up to 1:400.
One quart of Elite Vigor will treat up to 100 gallons of water.
In order to assure that all residues have been removed, apply a sample of the rinse water to sensitive broadleaf plants and after sufficient time, observe for wilting or severe stress.
If stress occurs, repeat cleaning process and retest as above.
